                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in with and is particularly useful in the production of cytotoxic proteins such as restriction embours beases which have not been aloned by traditional methods. The light for methods expand the abolity to incorporate non-coded amono acids into large protein sequences by embouring a symbolic perfect it misent with the resemply probes, splice bease. The first traditional standards of an embouring and finating thus to an in vivo expresses protein isolated using a modified that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    with a populate, the method comparises demendating at least one obtained this ester tunated target protein and at least one target populate having a specified N terminal and leasting the target populate to the target protein. The method allows producing our synthetic lusion proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    specification describes a method for fusing an expressed profein
that treat ind or diagnosting e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 survey associated generorance and being detections canner;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a plasmid used in the course of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      r

The proteins can also be used to aid wound healing and epithelial cell profileration, to prove extending decide sundurn, to maintain orders better transplantation, for supporting cell culture of primary discues, to respect thissues, to bentify their contents of primary discues, to respect to its substitutionals, and can be used as a road additive of proservative to modify storage properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mutations in the new genes. Specific uses are described for each of the 29 drones, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or troatment of proliferative discrete, discrete, discrete in the immune system, abnormalities, haematopoletic discretes, discusse of the immune system, AIDS, autoimmane discasse (e.g., theomatoria arthritis), inflammation, allowed systems of discrete, discretes, discrete attacked limit, skin discretes, countains, sepsie, discrete attacked prossis, conditions and openies, discretes, attacked discretes, and openies discretes, kidney discretes, cardiovascular discretes, and openies discretes, kidney discretes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antibodies specific for a protein of the invention can be used in allowisting symplects associated with the discrete actioned above, and in diagnostic immediates as a rediscourse except a respectively immunosorbent issur (BLISA). The present sequence represents a buman secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AARO15389-AAR05473 represent cLNAs corresponding to 29 human secreted protein genes, and AAE01546-AAE01640 represent the proteins they encode AAE01631-AAE01660 represent human secreted protein fragments or variants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The province are gold of the kinds of the first antident. The volcing causer untident have cytostally artivity and run be used in use the prevention therapy and vaccine production. N and P may be used in the prevention diagnosis and treatment of diseases associated with inappropriate P captegratur. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's general taster the addivity of P by expressing inactive proteins or to supplement the patients own production of P. and the patients of the production of P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present invention.

N.B. Nades 656 to 682 and page 70% of the sequence listing were missing at time of publication, meaning no sequences are present for SEO ID Not1927 to [055, 792] and 7922.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Additionally. N may be used to produce the eclon caseer associated Ps, by inserting the nucleic acids into a bost sell and culturing the ceil to express the profess N and P can be used in the presention, diagnosis and treatment of colorectal carcicomas and cancers. AAH37196 to AAH37204
Isolated chromosomal region, used to identify a depotype responsible for raised dimestibility in maize, is identified by UMP 67 and UMP 17
                                                                                                                                                 WP1; 2,41-465575/5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polynumicolidos may be used in diagnostics and research, such as for chromoseme identitication, and as hybridisation probes, the proteins that he used to prevent discusses such as noural discussors, immuno                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                    or This sequence represents a nucleic acid molecule which encodes a secreted human projein. The gene number, and the clone it is derived to secreted human projein. The gene number, and the clone it is derived from are detailed in the descriptor line. The gene can be used to or generate fusion projeins by linking to the gene to a human immunoglobulin of Fc portion (e.g. AAXO4302) for increasing the stability of the fused protein as compared to the human protein only.

On the invention relates to 86 novel genes and their fragments (nucleic of erid sequences AAXO431: x34410; indice and loration modical countrious e.g. by protein or gene therapy. Also, pathological over conditions e.g. by protein or gene therapy. Also, pathological or polymentides in a sample or by abtermining the presence of mutations in the new polymenters idea, specific uses are described to each of the 86 or polymerlessistes, based on which its saes are described to each of the 86 or generalized uses.
